

EVERY LESSON A PROBLEM-SOLVING LESSON

Get a fresh, focused take on using and applying maths. Through INSET days and in-class support, we work with the head, teachers and TAs to help you adopt a problem-solving approach for all of your maths.

What's involved?

This PD package includes:

- turning activities into problem-solving opportunities
- the effective use of questioning
- strategies to promote speaking and listening in the classroom
- the role of concrete apparatus in supporting problem solving

How does it work?

Typically this programme begins with a whole-school INSET. Then we run eight days across two terms, each including planning, team teaching and review. We also provide TA training and twilight staff meetings. The maths subject leader is released to attend the support sessions for all year groups and to help embed good practice throughout the school. The number of days, content and timing can be adapted to suit you.
