

DEVELOPING CONSISTENCY IN CALCULATION

Are different strategies in different year groups confusing some learners? You can make a real impact on children's learning by working with us to develop a whole-school consistent approach to calculation.

What's involved?

This PD package includes:

- reviewing progression in calculation across the school
- practical approaches to teaching addition, subtraction, multiplication and division
- the use of resources, models and images to support children's learning
- children's misconceptions and how to tackle them
- producing a whole-school calculation policy

How does it work?

Usually spanning five in-school days, we run a mix of INSET sessions for teachers and TAs, focused support in each year group, twilight staff meetings and parents' evenings. We also support your maths subject leader in producing a calculation policy. The precise number of days, content and timing is flexible.
